

HR-4 KIT Instructions

Tools Needed:

Philips Screwdriver
Needle Nose Pliers

1. Use a deburring tool or the back of a steak knife, to round over edges on all parts (this is optional, but laser cut parts can seem sharp).
2. The bottom shelf should be turned upwards.
3. All legs, have (4) sets of holes, (2) are closer than the others; this is the bottom of the leg.
4. Assemble legs to bottom shelf, only finger tight.
5. All other shelves are turned downward.
6. Once all shelves are in place. Finally tighten up all screws with screwdriver & needle nose pliers.

PRO TIPS:

Work towards the middle of your table, to prevent dropping hardware on floor. Setting on a towel will help.

For tight areas, use the needle nose pliers to insert washer, and hold nut in place, while turning screwdriver on the outside.

Put two screws in one side of the shelf (left & right leg 1&2). Then turn the unit around and put the opposing screws in the opposite holes (leg 3&4) on that same shelf. This way the four remaining holes on that shelf will line up easier.

Kit should take about 1 hr to assemble.
